

GSE149614: PGAM5 and MYO19 RNA expression in HCC macrophages

All 7,448 macrophages from 10 primary tumor T samples; all zeros retained

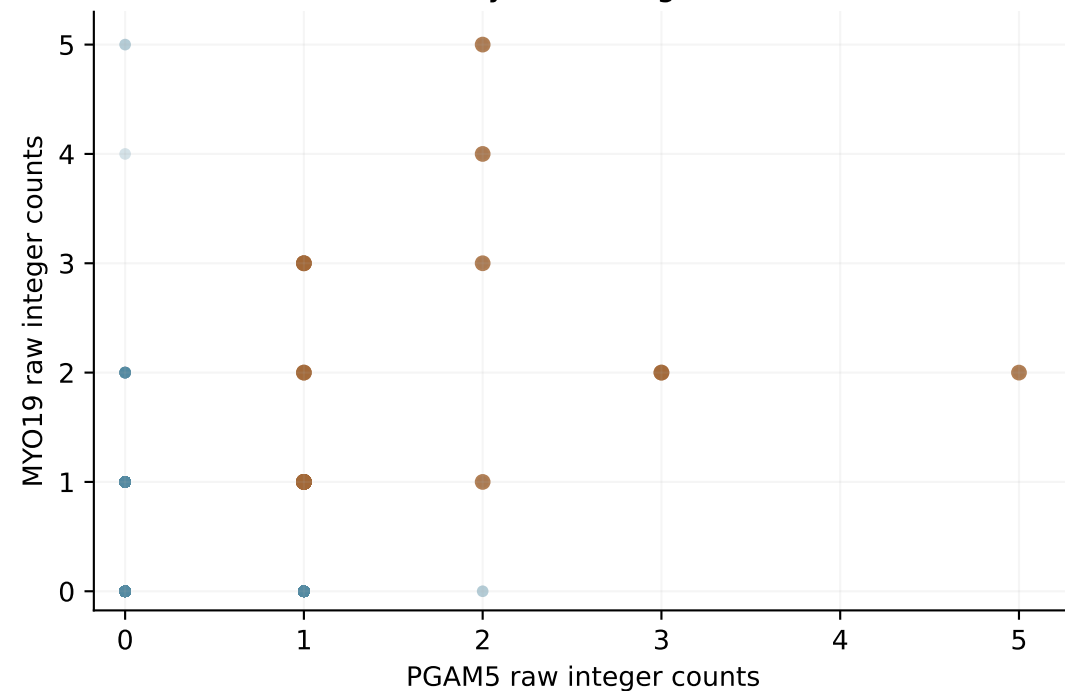

Primary: log1p(CP10k)

Spearman rho = 0.0630; two-sided asymptotic p = 5.41e-08
Monte Carlo permutation p = 5e-06
(0 extreme / 200,000 shuffles; plus-one estimate at resolution limit)

Pearson r = 0.0197; two-sided p = 0.0889
Pearson secondary BH q = 0.0889

Sensitivity: raw integer counts

Spearman rho = 0.0682; two-sided asymptotic p = 3.81e-09
Spearman secondary BH q = 5.71e-09

Pearson r = 0.1798; two-sided p = 3.76e-55
Pearson secondary BH q = 1.13e-54

● All macrophages (zeros retained) ● Both detected (n=24)

Detected: PGAM5 197; MYO19 311; both 24; neither 6,964. Identical coordinates overlap.
All tests use 7,448 cells. Cell-level p-values do not establish an independent patient-level association.
