# GSE203612 | NYU_LIHC1 Visium | 1,634 retained spots | genuine H&E coordinates

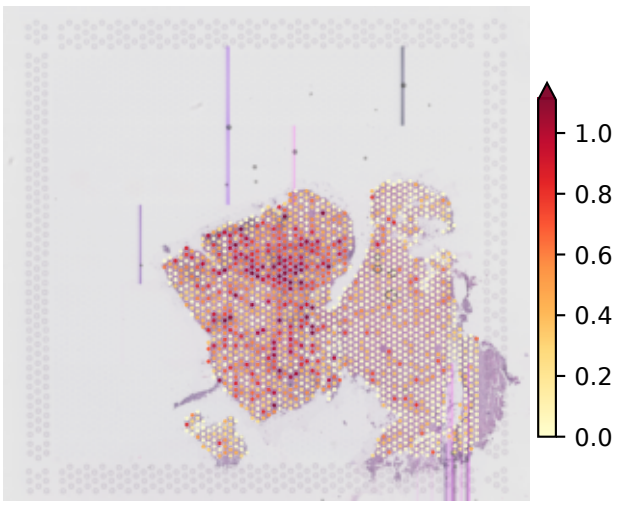

Three section-specific mixed RNA regions

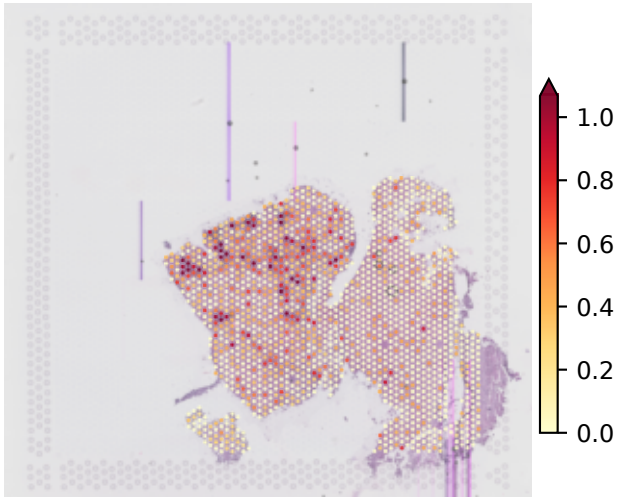

PGAM5 RNA (all spots)

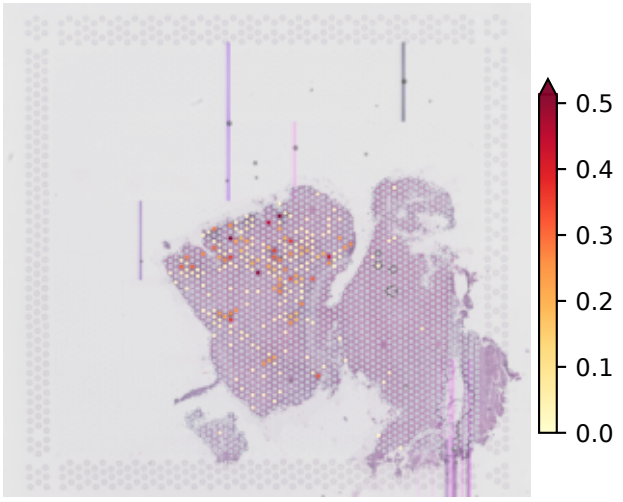

Macrophage-core RNA

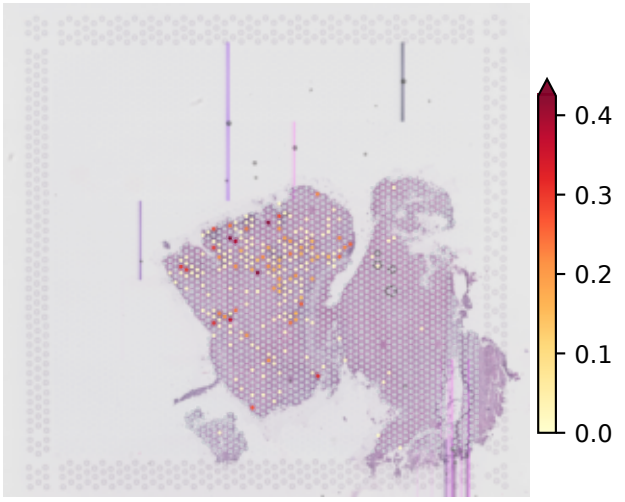

T-lineage RNA

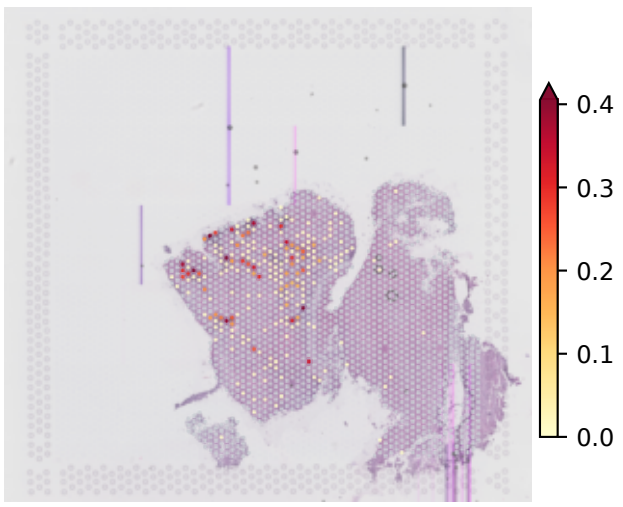

Exhaustion-core RNA (T gate)

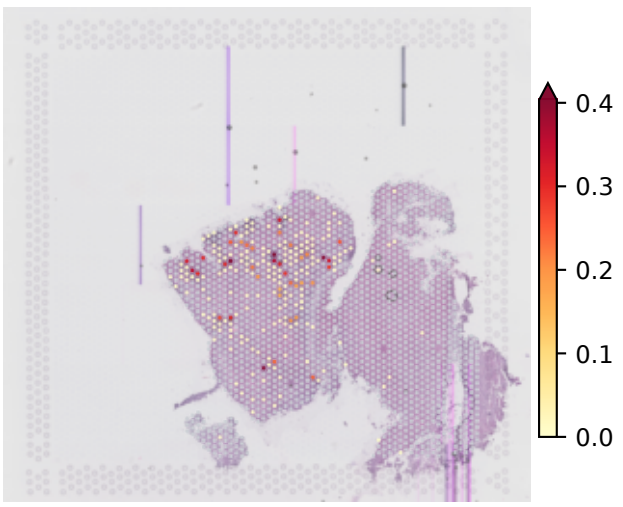

Exhaustion without CTLA4/TIGIT (T gate)

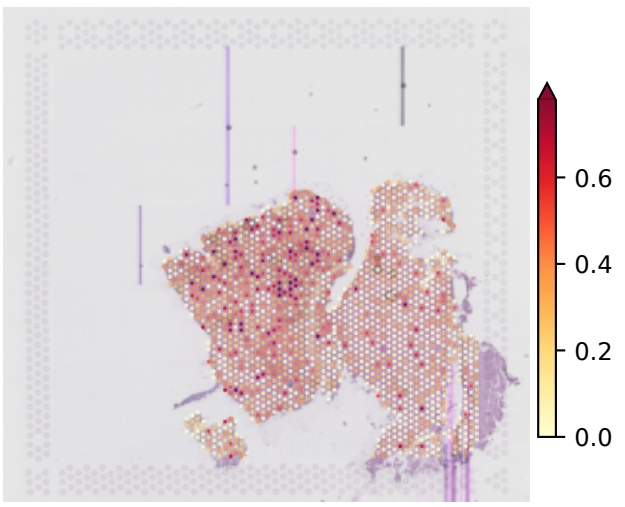

Early activation RNA (T gate)

Treg-related RNA (T gate)

Interferon-response RNA

S0: CYP3A4/TF | Hepatocyte-RNA-rich mixed region
S1: DCXR/GLUL | Metabolic hepatocyte-RNA mixed region
S2: CD74/HLA-DRB1 | Immune/stromal-RNA mixed region

Colors: PGAM5 log1p(CP10k); programs: mean log1p(CP10k), zeros retained. Each panel has its own Q99 display limit. Grey = outside T gate.
Mixed spots: signal source and causal communication are unresolved. Labels do not classify every spot as malignant.
