

GSE202642 HCC: PGAM5 RNA detection and macrophage clustering
7 patients (user-confirmed); 12,135 macrophages; cycle genes/cells retained

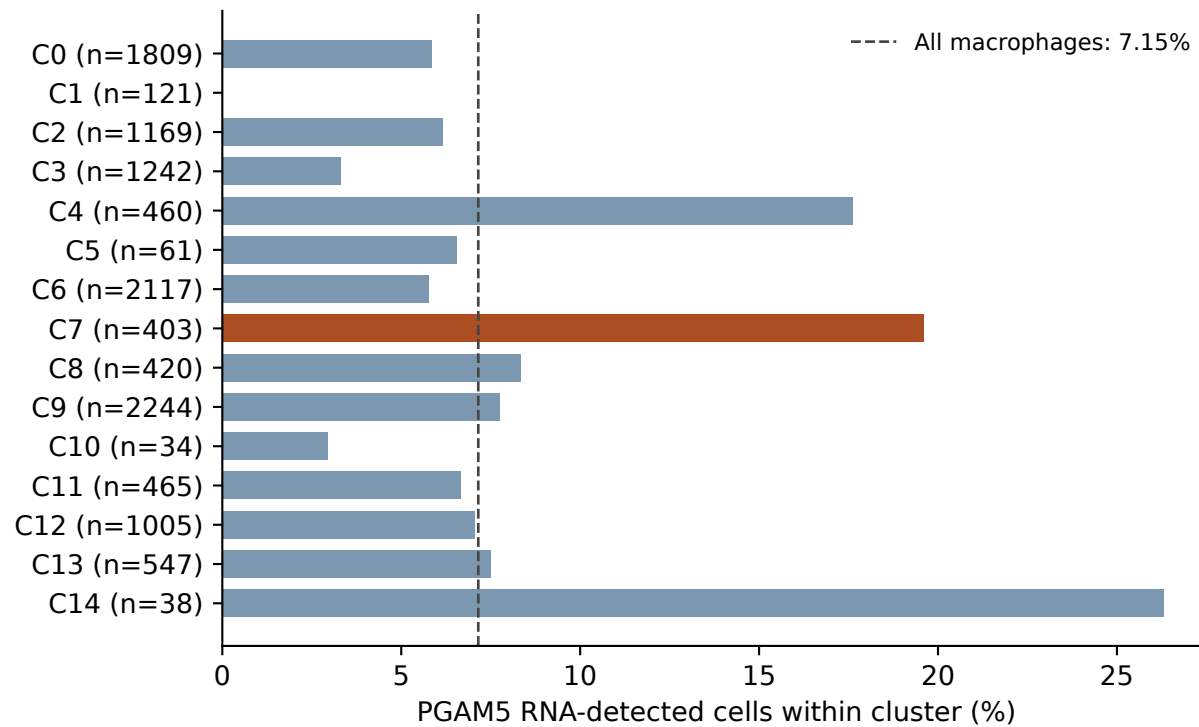

A Macrophage clusters (PGAM5 excluded from features)

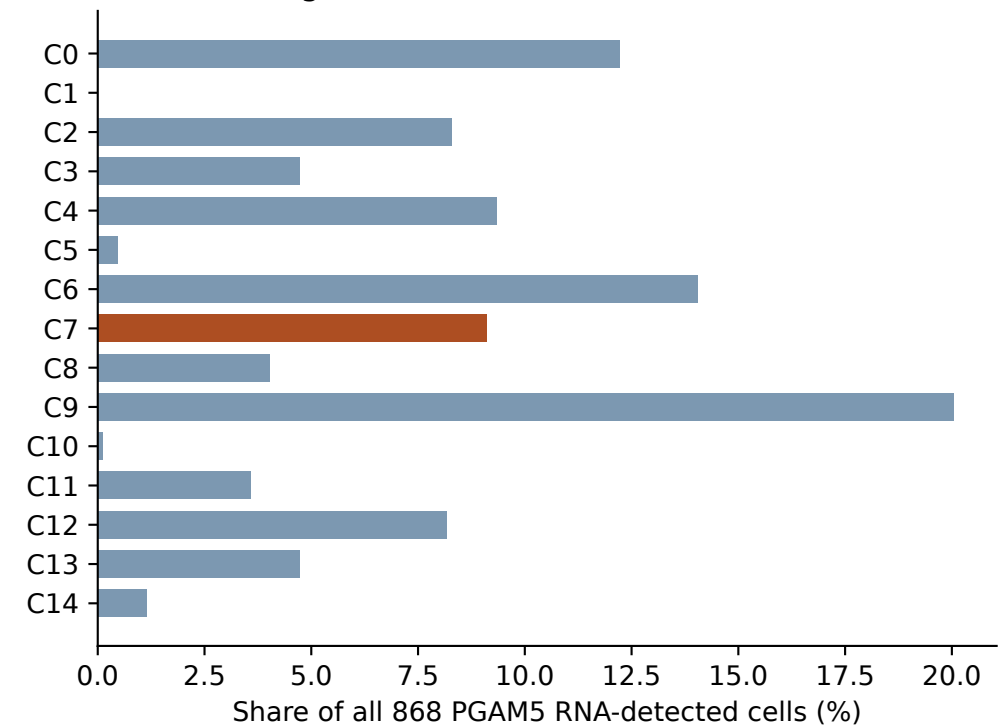

B PGAM5 RNA detection spans multiple clusters

C Within-cluster detection rate

D No single cluster contains most detected cells

UMAP is descriptive. Cluster evidence also uses non-PGAM5 markers, patient consistency and resampling.
Highlighted C7: PGAM5-enriched cycling macrophage candidate; it is not the complete PGAM5-detected category.
